

COLORTHIN

Calvin Klein

Launched in June 2014, Colorthin by Calvin Klein features a new and innovative technology of lightweight, flexible and colorful materials. Introduce a new customer base to the world of Calvin Klein platinum label eyewear with this unique capsule collection. The Calvin Klein Colorthin styles represent the cutting edge in Eyewear Technology: extreme lightness, high degree of resistance and flexibility, all combined with the most sophisticated materials that have been used in their production, make them absolutely unique.

The very sophisticated Nylon Grillamid TR90, used by injection printing, gives the CK Colorthin styles excellent memory form, high breaking strength, extreme lightness, better fit (the frames fit any face and maintain a correct positioning on the nose) and 100% hypoallergenic features. As base 4 frames the CK Colorthin can be equipped with most of the lenses that are available on the market. Best results can be obtained with lenses ranging from base 2 to 5. The T- groove allows the use of lenses from 180 mm up to 5 mm of thickness. The numerous tests the CK COLORTHIN styles have gone through proved their excellent dynamic qualities.

3 injected plastic styles

The CK Colorthin design combines CK's particular attention to detail with the needs of the consumer, always pursuing stylish products without sacrificing comfort for the wearer. Charming and youthful shapes are the key to success of this capsule collection. There's nothing like this in the market!
